Life Science
Clinical trials

Medical and biotechnology research and development continues at great pace with the overall aim of bringing life-changing products to market as efficiently and safely as possible.

Changes in regulations and requirements by government regulators and ethics committees make the development of a medicinal product more challenging than ever.

The way clinical trials are designed and conducted is constantly evolving due to advances in technology and information about diseases. There is also greater demand for clinical trials to be initiated and completed within short timescales to enable faster access of new products to patients.

At Chubb we know that clinical trials can be complex, so we can tailor insurance solutions which best suits the type of trial programme and the client’s needs, in a timely and compliant manner: ranging from single clinical trials to the large multinational trial programmes.

**Insurance solutions for**

- Single clinical trials
- Multinational clinical trials
- Indigenous and multinational multiple trial programmes

**Target customers**

- Pharmaceutical manufacturers
- Biotechnology organisations
- Medical device and equipment manufacturers
- Generics companies
