

Risk Engineering Services in Europe

CHUBB®

Crafting solutions across a global network

With a global network of 550 risk engineers, Chubb has been providing risk management, loss mitigation and prevention services to our clients around the world for many years.

From complex multinationals to single site businesses, we craft bespoke and practical risk managed and engineered solutions, enabling clients to identify and remove causes of loss, achieve best industry practice and protect their bottom line.

We provide risk management advice in areas including :

- Property
- Casualty (general liability, products liability, employers' liability)
- Terrorism
- Cyber
- Technical Lines
- Energy
- Environmental
- Marine.

Our approach

Chubb's Risk Engineering services are custom crafted to address clients' specific risks - from repetitive injuries to emerging hazards to catastrophic failures.

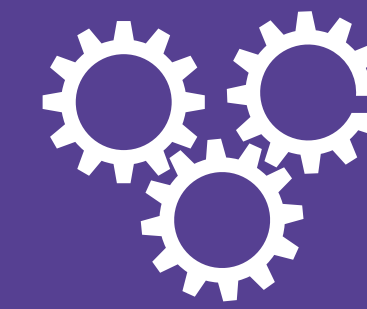

Helping clients manage their risks through a collaborative approach.

Our risk engineers work with clients to gain a deep understanding of their hazards and exposures. We also support clients and brokers through training and provision of pragmatic guidance and technical information.

Our expertise

- An internationally recognised group of experienced risk engineering professionals with multiple qualifications and accreditations
- Expertise in Property, Casualty, Cyber, Environmental, Technical Lines, Energy, Marine and in our Industry Practices, such as Life Sciences, Technology and Real Estate
- Servicing built on a unique blend of industry and technical expertise; business acumen; and a solutions orientated approach.

Technical guidance based on:

- Comparisons of local and international risk management and loss prevention standards
- Recent research data and actual loss histories
- Industry best practice expectations

The client benefits

Understanding the hazards and risks to their business and how to mitigate them

Short to long term risk solutions

Establishing pragmatic and cost effective risk engineered solutions

Easy to understand benchmarking systems

Protecting the business and balance sheet

Customised reports

Customised risk engineering services and programmes

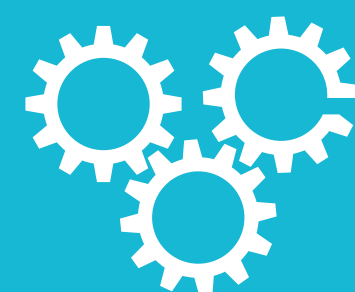

Access to recent research data and actual loss histories

Extensive industry experience

Stronger relationships based on professional engineering technical input and trust

Consultative engineering based approach

Property risk management

Along with property risk engineering inspections and risk improvement solutions, our engineers also have the specialist skills to offer a wide variety of added-value services:

Evaluation and review

- Corporate risk management standards evaluations and gap analysis
- Active and passive fire protection system reviews and evaluations
- Active and passive security system reviews and evaluations
- New build and refurbishment project reviews
- New plant and upgrade reviews
- Fire and security protections impairment management
- Infrared thermography testing and evaluations
- Allied perils evaluations
- NAT Cat mapping and accumulation analysis
- On-site risk assessment and evaluation inspections
- AAA and risk score benchmarking

- Risk profiling/self-assessment tools
- Customised reporting
- Business interruption/business continuity planning analysis
- Supply chain analysis

Training, guidance and support

- Development of best practice guidance documents and emerging risk bulletins
- Training seminars and workshops
- Technical support
- Risk engineering programme management
- Claims analysis/lessons from losses

Casualty risk management

Helping businesses achieve their risk management ambitions whatever the size, location or budget.

Added value services for Casualty risk management include:

Evaluation and review

- Qualitative and quantitative assessment of risk management standards and claims defence capabilities
- Risk profiling/assessments
- Customised reporting
- Technical support
- Product quality system analysis
- Product recall programmes
- Liability claim history and trend analysis
- Implementation of agreed risk engineering plans with customised reporting
- Product liability risk evaluation and advice

Training, guidance and support

- Risk engineering programme management
- Development of best practice guidance documents and emerging risk bulletins
- Managed provision of specialist consultants to deliver a range of risk management solutions including: management training; Safety culture evaluations; incident investigation process improvement; slips and trips audits; machinery guarding reviews; manual handling risk reduction and workplace transport reviews
- Bespoke training seminars and workshops
- Expert technical support

Marine & Transportation

Transportation professionals with experience of seagoing, port operations and freight forwarding. Providing support in the assessment of risk and safe delivery of different cargo types worldwide.

Services include the following:

- Reviews and audits of logistics supply chains
- Support with logistics service provider selection, contracts and KPI's
- Cargo theft prevention, both in transit and whilst in store
- Packing assessments
- General load stowage and securing reviews
- Cool chain/pharmaceutical reviews
- Warehouse assessments
- Vessel suitability reviews
- Project cargo management/heavy lift surveys
- Specie risk assessments
- Training and support
- Support with the development of relevant Standard Operating Procedures (SOP's)
- Education and Training
- Post loss surveys/post loss learning support

Speciality lines

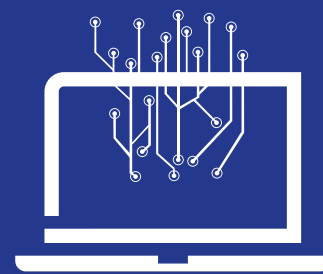

We offer services across a number of speciality sectors and have expertly trained engineers who are familiar with local laws and regulations.

Some of the services we offer across these lines include:

Terrorism

- Risk Identification and evaluation
- Protection security and risk mitigation analysis
- Mobile risk analytics
- Customised reporting

Cyber (data privacy and business interruption risk)

- Investigations and analysis of information governance including risk management methodologies and framework
- Cyber readiness evaluations
- Supply chain and conduit threat risk evaluation
- Technological and procedural controls evaluation
- Incident response & breach detection capability
- Incident response plan and recovery capabilities
